PROGRAM OUTCOMES:

After the completion of the course, students will be able to

- Understand the operation and performance parameters of differential operational amplifiers.
- Understand the linear and non-linear applications of operational amplifiers.
- Analyse and design different types of active filters using op-amps
- Acquire skills required for designing and testing integrated circuits.
- Understand pulse digital modulation systems such as PCM, DPCM and DM.
- Analyse various digital systems for their performance in terms of probability of error.
- Understand the concepts of information theory and need for source coding.
